## **FRUSTRATED MANAGERS SPARK SECOND SAP SOLUTION**

Frustrated managers who were reluctant or slow to approve purchase requests because of technological roadblocks have sparked a second SAP software solution.

Following on from ExpressPO which streamlined the SAP purchase order approval process, 10seconds Software have delivered ExpressPR, a sister product that monitors and manages purchase requisitions requiring approval.

"A lot of busy managers we talked to said purchase approvals became an administrative pain because they had to stop what they were doing and launch SAP or because they had to wait till they were back in the office to do so," said Jack Cornford, Senior Architect at 10 Seconds Software.

"In coming up with ExpressPR we were able to combine a deep knowledge of the complexities of SAP purchasing with a simple intuitive user experience. It monitors purchase requisitions and simply sends emails to the appropriate manager seeking approval. Manager's can then easily approve requisitions on any web browser or iPhone, Blackberry or SmartPhone in just two clicks without having to launch SAP," said Jack.

The software is particularly useful for those who are on the road or only have access via their mobile phones for long periods of the day.

"With an installation that takes minutes and no configuration changes to your SAP R/3 system, ExpressPR radically streamlines the purchase requisition approval process delivering approval requests right into manager's laps." "This is an IT solution that avoids the over-use of IT," said Jack.

ExpressPR key features include:

- Accessibility via your desktop browser, iPhone, Blackberry or smart phone
- Zero SAP configuration required. ExpressPR integrates seamlessly with your SAP system
- ExpressPR can monitor multiple SAP release strategies
- Real-time notification of purchase requisition approval requests - direct to your inbox
- No requirement for the SAP Workflow module
- Two clicks and your purchase requisition is approved! It's that simple.
- Supports single sign-on
- Installation takes minutes.
